Computer Scientist Finds a Cure for Her Son's Autism with Homeopathy

Amy Lansky, PhD was a research computer scientist working for NASA when her young son Max became one of the increasing number of autistic children in the United States today. Determined to find a cure, her family turned to **homeopathy**, an alternative medical system of the 1800's. After a year and half of treatment, Max was testing above age level. By the time he was in 4th grade, all of his minor learning problems had disappeared. Today Max is 15 years old and no one who meets him would guess that he once was autistic.

After this and many other curative experiences in the rest of her family, Lansky gave up her career in computers to become a student, writer, promoter, and practitioner of homeopathic medicine. She also authored the best-selling book, *Impossible Cure: The Promise of Homeopathy* -- a comprehensive introduction to the history, philosophy, and experience of homeopathic medicine. Lansky is an executive board member of the National Center for Homeopathy. She has also been active in the national health freedom movement. She served on the executive board of the California Health Freedom Coalition – the organization that sponsored and passed California Senate Bill SB-577 in September 2002, which legalizes the many unlicensed forms of alternative medicine used by Californians today.

“My goal in writing *Impossible Cure* was to simply let people know about what I had found,” says Lansky. “Most people have heard the term ‘homeopathy’ – but have no idea what it really is. That includes doctors. What I have learned and experienced in the past nine years is incredible. If I can help others the way my family was helped, I will have accomplished my goal.” Lansky has tried to make her new book accessible and exciting for readers. It includes dozens of testimonials of homeopathic cures for a wide variety of physical, mental, and emotional conditions, including a chapter about her family's experiences. Described as “one of the most complete pictures of homeopathy ever written,” *Impossible Cure* also includes an extensive science chapter that presents recent clinical trials of homeopathy, as well as some discussion about how homeopathic remedies might work. *Impossible Cure* has won endorsements from some of the leading authorities in alternative medicine today, including: Larry Dossey, MD (known for his work on prayer and healing); Wayne Jonas, MD (former director of the Office of Alternative Medicine at NIH); Bernard Rimland, PhD (director of the Autism Research Institute); and Michael Castleman (well-known author and columnist on alternative approaches to health care). “Homeopathy was once an important and widespread medicine in America,” says Lansky. “It had more success in treating chronic disease and epidemics than conventional medicine. That is why it was attacked and suppressed. Luckily, the homeopathic message is being rediscovered today, and the timing couldn't be better. Homeopathy's time has finally come.”
